

Average Price Trend

The line chart shows the average price trend by delivery start date for January 2025, with high volatility and frequent price spikes and drops throughout the period.

Observation

- Early January starts with high average prices around 180, but quickly drops below 60, followed by a sharp rebound above 180 by January 5.
- Mid-January sees fluctuating prices, mostly between 100 and 140, reflecting ongoing instability and short-term market shifts.
- Late January features several sharp dips, with prices dropping near 60 again around January 24–25, before partially recovering but ending with moderate prices around 100 by February.

Data Pattern Insights

- The price is highly unstable, with both quick rises and falls, indicating a volatile market or supply-demand fluctuations.
- Multiple peaks and troughs suggest external influences or seasonal effects impacting price consistency.
- By the end of the month, prices settle somewhat but remain below the initial highs, possibly reflecting market correction or resolution of earlier volatility.
